

**FIGURE 1**

FIG. 1 is a block diagram of a system architecture for handling HTML and Non-HTML data. A Client (12) and a Terminal (26) containing a Browser (28) are connected via a Network (54) to a Server (14). The Server (14) is composed of an HTTP Server Module (30) and a Non-HTML Server Module (24). The HTTP Server Module (30) includes a URL Interface (48) and an HTML Translator (44). The Non-HTML Server Module (24) is connected to a Non-HTML Database (16). The Non-HTML Database (16) contains objects 18a-18n, 62a-62n, and 20, with 20 further containing 22a-22n. The HTTP Server Module (30) is also connected to an HTML Database (10). The HTML Database (10) contains an Index (48) with entries 50n, 64, and 66n, and a Link (66a) pointing to HTML Objects (50a-50n). The HTML Objects (50a-50n) include objects 50a and 52.
